New Features Report Summary

Understanding laboratory reports can be complex, often leading to unwarranted anxiety.

At Healthians, we understand that you shouldn't have to rely on a Google search to decipher your own health report. That's why we offer comprehensive summaries that are easy to understand.

Virendra Kumar Singh

Booking ID 11952805221 | Sample Collection Date: 19/Oct/2024

Summary of Test Results

Dear Virendra Kumar Singh,

Thank you for sharing your recent health test results. It's understandable to feel concerned when faced with numbers that fall outside the normal range. However, it's important to remember that these values can be influenced by a variety of factors, and many individuals experience fluctuations in their blood parameters from time to time.

Your results indicate some areas that may benefit from attention. For instance, certain types of white blood cells and platelet measurements are showing variations that could suggest your body is responding to some underlying factors. This is not uncommon, and with the right lifestyle adjustments and monitoring, many people see improvements in their health.

Suggestions for Improvement

1. Balanced Diet

: Focus on incorporating a variety of fruits, vegetables, whole grains, and lean proteins into your meals. Nutrient-rich foods can support your immune system and overall health.

2. Regular Exercise

: Engaging in regular physical activity can help improve circulation and support your body's natural processes. Aim for at least 150 minutes of moderate exercise each week, such as walking, cycling, or swimming.

3. Stress Management

: Consider incorporating stress-reducing practices into your daily routine, such as mindfulness, meditation, or yoga. Managing stress can have a positive impact on your overall well-being.

4. Routine Check-ups

: Regular health check-ups can help monitor your blood parameters over time and ensure that any changes are addressed promptly. Staying proactive about your health is key.

Remember, taking small, consistent steps can lead to significant improvements in your health. You are not alone in this journey, and with the right approach, you can work towards achieving better health outcomes.

DEPARTMENT OF BIOCHEMISTRY

Healthians Early Fever Package

Test Name	Value	Unit	Bio. Ref Interval
-----------	-------	------	-------------------

Alanine aminotransferase - (ALT / SGPT)

Alanine Aminotransferase (ALT/SGPT) 20.6 U/L 3 - 50
 Method: IFCC
 Machine: BECKMAN COULTER AU700

ALT is commonly measured as a part of a diagnostic evaluation of hepatocellular injury, to determine liver health. Elevated ALP levels are seen in Biliary Obstruction, Osteoblastic Bone Tumors, Osteomalacia, Hepatitis, Hyperparathyroidism, Leukemia, Lymphoma, paget's disease, Rickets, Sarcoidosis etc.

Aspartate Aminotransferase(SGOT)

Aspartate Aminotransferase (AST/SGOT) 35.90 U/L 3- 50
 Method: IFCC
 Machine: BECKMAN COULTER AU700

AST levels increase in viral hepatitis, blockage of the bile duct ,cirrhosis of the liver, liver cancer, kidney failure, hemolytic anemia, pancreatitis, hemochromatosis. Ast levels may also increase after a heart attack or strenuous activity.

Slight or moderate increases in AST levels may also be observed after ingestion of alcohol, or administration of drugs including penicillin, salicylates and opiates.

DEPARTMENT OF HAEMATOLOGY

Healthians Early Fever Package

Test Name	Value	Unit	Bio. Ref Interval
Malaria Parasite (MP)			
MALARIA PARASITE	NOT SEEN		Not Seen
Method: Microscopy			

Malaria is caused by parasites that are transmitted to people through the bites of infected female mosquitoes. WHO recommends prompt malaria diagnosis either by microscopy or malaria rapid diagnostic test (RDT) in all patients with suspected malaria before treatment is administered.

The essential method for a definitive diagnosis of malaria remains the finding of parasites (Plasmodium) in a blood film, followed by the identification of the particular species by morphology. Examination of thick and thin blood films remains the most sensitive routinely applied technique.

- If parasite is not seen under microscope, reported as Malarial Parasite not seen in the smear examined.
- If parasite is seen on smear, reported as Malarial Parasite seen on smear examined with type, stage and parasite index in case of Plasmodium falciparum.
- The various species of plasmodium are P.falciparum, P.vivax, P.ovale and P.malariae.

Cell features	P. falciparum	P. vivax	P. ovale	P. malariae
Infected red cells	Normal size; Maurer's clefts	Enlarged; Schuffner'dots	Enlarged;oval and fimbriated; Schuffner'dots	Normal or microcytic; stippling not usually seen
Ring forms (early trophozoites)	Delicate; frequently 2 or more; accolé forms; small chromatin dot	Large, thick; usually single (occasionally 2) in cell; large chromatin dot	Thick compact rings	Very small compact rings
Later trophozoites	Compact, vacuolated sometimes 2 chromatin dots	Amoeboid; central vacuole; light blue cytoplasm	Smaller than P. vivax; slightly amoeboid	Band across cell; deep blue cytoplasm
Schizonts	18-24 merozoites, filling 2/3 of cell (usually only seen in cerebral malaria)	12-24 merozoites, 8-12 merozoites irregularly arranged filling ¾ of cell		6-12 merozoites in daisy-head around central mass of pigment
Pigment	Dark to black clumped mass	Fine granular yellow-brown	Coarse light brown	Dark, prominent at all stages

Bio. Ref Interval

The International Council for Standardization in Haematology (ICSH) recommends reporting of absolute counts of various WBC subsets for clinical decision making. This test has been performed on a fully automated 5 part differential cell counter which counts over 10,000 WBCs to derive differential counts. A complete blood count is a blood panel that gives information about the cells in a patient's blood, such as the cell count for each cell type and the concentrations of Hemoglobin and platelets. The cells that circulate in the bloodstream are generally divided into three types: white blood cells (leukocytes), red blood cells (erythrocytes), and platelets (thrombocytes). Abnormally high or low counts may be physiological or may indicate disease conditions, and hence need to be interpreted clinically.

The Mentzer index is used to differentiate iron deficiency anaemia beta thalassemia trait. If a CBC indicates microcytic anaemia, these are two of the most likely causes, making it necessary to distinguish between them.

If the quotient of the mean corpuscular volume divided by the red blood cell count is then 13, thalassemia is more likely. If the result is greater than 13, then iron-deficiency anaemia is more likely.

DEPARTMENT OF SEROLOGY

Healthians Early Fever Package

Test Name	Value	Unit	Bio. Ref Interval
-----------	-------	------	-------------------

Typhoid IgM antibody

S.Typhi IgM antibody -Rapid card test

Negative

Negative

Method: Immunochromatography

It is a rapid, qualitative, immunochromatography test for detection of IgM antibodies to S. typhi in human serum/plasma or whole blood specimen. The test qualitatively detects the presence of IgM class of Lipopolysaccharide (LPS) specific to S. typhi in human serum/plasma or whole blood specimens.

A febrile condition, Typhoid fever, is a bacterial infection caused by Salmonella serotypes including S. typhi, S. paratyphi A, S. paratyphi B. The symptoms of the illness include high fever, headache, abdominal pain, constipation and appearance of skin rashes. Accurate diagnosis of typhoid fever at an early stage is not only important for etiological diagnosis but to identify and treat the potential carriers and prevent acute typhoid fever outbreaks.

Dengue NS1 Antigen - Rapid

Dengue Fever NS1 Antigen, Rapid

Negative

Negative

Method: Immunochromatography

NOTE: This report is based on a screening test and is provisional. Diagnosis of acute dengue infection should be confirmed by an capture ELISA.

Dengue viruses, transmitted by Aedes aegypti and Aedes albopictus mosquitoes, are widely distributed throughout the tropical and subtropical areas of the world. There are four known distinct serotypes of dengue virus (DEN-1, DEN-2, DEN-3 and DEN-4). Rapid and reliable tests for primary and secondary infections of Dengue are essential for patient management. An infected person experiences the acute symptoms of Dengue when there is high level of the virus in the blood stream. As the immune response fights the Dengue infection, the person's B cells begin producing IgMs and IgGs antibodies that are released in blood and lymph fluid, where they recognize and neutralize the Dengue virus and viral molecules such as Dengue NS1 Ag. NS1 Ag is a highly-conserved glycoprotein that is present at high concentrations in the sera of Dengue-infected patients during the early clinical phase of the disease. NS1 antigen appears as early as Day 1 after the onset of the fever and declines to undetectable levels by 5–6 days. Hence, tests based on this antigen can be used for early diagnosis.

Chikungunya IgM Antibody-Rapid card

Chikungunya IgM Antibody
Method: Immunochromatography

Negative

Negative

Chikungunya IgM test is an immunochromatographic assay for the detection of IgM / IgG antibodies against Chikungunya virus in human serum, plasma, or whole blood specimen. This test kit is for in vitro use only. This is intended for professional use, only for an initial screening test. Chikungunya is the arboviral disease caused by Chikungunya virus. Chikungunya virus is a genus of alpha virus and is transmitted by Aedes mosquitoes especially Aedes albopictus and Aedes aegypti are the presumed vector. Chikungunya disease does not often result in death, but the symptoms can be severe and disabling. The common symptoms of Chikungunya are fever, rash, arthralgia, and joint pain. Since some of these clinical symptoms are similar to symptoms of Dengue, Chikungunya can be misdiagnosed as Dengue in the common Dengue outbreak areas.

Healthians Labs

Terms & Conditions:

- 1) Machine Data is available for last 7 days only. In case of manual testing & outsourced testing, machine data will not be available.
- 2) CBC parameters may vary when it is manually reviewed by the Pathologists.
- 3) **For Thyroid tests** - Circulating TSH shows a normal circadian rhythm with a peak between 11pm-5am and a nadir between 5pm-8pm. TSH values are also lowered after food when compared to fasting in a statistically significant manner. This variation is of the order of ±50%, hence time of day and fasting status have influence on the reported TSH level.
- 4) **For Lipid profile** - Lipid and Lipoprotein concentrations vary during the normal course of daily activity. Also, certain drugs, diet and alcohol can have lasting effects on Triglyceride levels. To obtain best results for Lipid testing, a strict fasting of 10-12 hours with a light meal on the previous night is recommended.
- 5) Test results released pertain to the specimen submitted.
- 6) Test results are dependent on the quality of the sample received by the Lab.
- 7) The tests are carried out in the lab with the presumption that the specimen belongs to the patient named or identified in the bill/test request form/booking ID.
- 8) The reported results are for information and are subject to confirmation and interpretation by the referring doctor to co-relate clinically.
- 9) Test results may show interlaboratory variations.
- 10) Liability of Healthians for deficiency of services or other errors and omissions shall be limited to the fee paid by the patient for the relevant laboratory services.
- 11) This report is not subject to use for any medico-legal purposes.
- 12) Few of the tests might be outsourced to partner labs as and when required.
- 13) This report is not intended to replace but to lead by providing comprehensive information. It is recommended that you consult your doctor/physician for interpretation of results.
- 14) All reports might not be applicable for individuals less than 18, pregnant women or individuals suffering from diseases for which health test has not been performed or symptoms not diagnosed.
- 15) This report is based on preventive health test screening and is meant for a healthy lifestyle. It does not provide any recommendation for life threatening situations.
- 16) It is strongly recommended to take required precautions for allergic reactions or sensitivities.
- 17) Authorised partner labs as mentioned for certain tests are as below:
HL/PL/001- Metropolis Healthcare Ltd
HL/PL/002- Thyrocare Technologies Limited
HL/PL/003- Lifecell International Pvt. Ltd. - Laboratory Services
HL/PL/004- Modern Diagnostic & Research Centre

HEALTH ADVISORY**Suggestions for Health & Well-being**

Virendra Kumar Singh

Booking ID : 11952805221 | Sample Collection Date : 19/Oct/2024

PHYSICAL ACTIVITY**PHYSICAL ACTIVITY**

Physical activities can vary from Regular walks (Brisk or normal), Jogging , Sports, Stretching, Yoga to light weight lifting etc. It is recommended to partake in physical activity at least 30 minutes a day for 3-4 days a week.

If regular workout is difficult, then we can adapt changes such as using stairs instead of lift/escalators and doing household work!

**STRESS MANAGEMENT****STRESS MANAGEMENT**

Managing stress is an essential part of well-being. Some day to day changes can help such as having sufficient sleep (6-8 hours), indulging yourself in meditation, positive attitude towards lifestyle, using humor, traveling, talking to people whom you feel comfortable with and making time for hobbies by doing what you love to do.

BALANCED DIET**BALANCED DIET**

A balanced diet is the key to healthy lifestyle. Include Whole grains, vegetables, whole fruits, nuts, seeds, beans, plant oils in your diet.

It is recommended to always have a high protein breakfast and a light dinner. Avoid items such as processed foods, potatoes and high calorie/sugar products. Don't forget to drink water regularly!

**BMI**

BMI recommended range is 18.5 to 24.9. Your BMI is 29.35, which is on a higher side.

Please fill your Health Karma to know your BMI results
BMI for your body helps prevent many untimely diseases and goes a long way.

BMI CHART

UNDERWEIGHT	NORMAL	OVERWEIGHT	OBESITY
Less than 18.5	Between 18.5 - 24.9	Between 25.0 - 29.9	More than 30
